

Gispen

**GISPEN TMNL**  
INGENIOUS AND  
PRACTICAL

### EASILY ADJUSTABLE FOR A HEALTHY POSTURE

#### Dynamic

As time passes, organisations and users change. This means that flexibility is essential, which is why this is one of the guiding principles of the TMNL programme. At the same time, we greatly value stability. A proper design will prove itself.

Gispen TMNL is a modular desk and (conference) table programme, and has been specially designed for intensive use. Ideal for dynamic organisations that set high standards when it comes to a multifunctional and sustainable office furnishing. The TMNL range includes a wide choice of desks and (meeting) tables. From compact desks to a shared workstation; TMNL allows you to create your ideal work environment. Its clever design makes Gispen TMNL quick to install and easy to set up, expand and move around.

#### Functional

An ingenious design supports and enhances a healthy work posture, and does so for every individual user. This is why TMNL users can easily adjust the desk height themselves. Quickly, straightforward and responsible.

#### HOW YOU CAN BENEFIT FROM TMNL

- **Design your own:** there are many options to give your interior the look that suits your organisation best.
- **Future-proof:** this furniture system is easy to adapt to your future needs and activities, while being environmentally friendly at the same time. Gispen will take back any components you no longer need; contributing to circular use of materials together.
- **Optimal use:** the clever modular system allows you to configure your workstation to suit your current needs.
- **Ergonomics:** alternating between a seated and standing position is good for your health.
- **Circular entrepreneurship:** with this product you will join Gispen in contributing to the Circular Economy. TMNL has been designed to allow for easy future returns and reuse of materials.
- **Clever workstation:** a sophisticated cable management system ensures a safe and tidy workspace.
- **Adaptable on site:** the desks can be altered at any time and on site, reducing transportation costs and preventing disruption of your primary work process.

### Powerful design

Clothes make the man, but colours are what define the workspace! The strongest design feature of TMNL is its square column leg. The legs can be finished in striking colours for a distinct accent; with a more understated colour, your desk will blend with the surroundings of your workspace. The tabletops, which are made of 100% circular materials, are also available in various colours; there are a great many colours and wood decors to choose from.

The 22mm poplar multiplex tabletops can also be provided with a Forbo Desktop top layer. This extra layer is pleasant to the touch and matches well with the sturdy design of the legs.

The T-shaped legs can also be provided with a metal side panel as an add-on, which can be painted in a colour of your preference.

### Solo workstation

Gispen TMNL can be recognised by its square T-shaped legs. The tabletop is made of chipboard with a melamine veneer. Gispen TMNL is also characterised by its use of sustainable materials. The frame, tabletop and undercarriage are easily assembled and easily adjusted to the correct height.

A **PROPER DESIGN**  
WILL LAST FOR **YEARS**

### TMNL keeps up with the times

Whenever the requirements for a workstation change, TMNL can easily change along with them. An agile workstation today, can become a fixed workstation tomorrow by adding cable ducts, surface-mounted power sockets and dividing screens. An open workstation can be provided with a side panel for privacy or a more classy look. In short, TMNL is very flexible in use and will adapt to your wishes.

### Dual workstation

Are you in need of a workstation that supports collaboration? Look no further than the Gispén TMNL duo workstation, a collaborative workstation with individual height adjustment.

Ideally suited for an agile work method and alternating users. With only a minimum number of components, you are offered maximum possibilities:

- Individual height adjustment
- Easy to expand into a desk setup for three, four or even more users
- A single fixed frame; an easy to clean workspace
- With either horizontal or vertical cable routing. Different types of cable ducts are easily attached to the frame
- Easy to (dis) assemble due to the clever construction
- Optional: various acoustic and functional dividing screens
- Function rail attached to the dividing screen for ergonomic accessories and a tidy workplace

## Office island

A group setup facilitates teamwork. The four tabletops of an office island can be adjusted separately, supporting the needs of the individual users. This allows people to alternate between a standing and seated position.

The dividing screen keeps things uniform when the tabletops are set to different heights. The side panels on the far ends of the setup give the users a sense of security. The panels also keep bags and rubbish bins out of sight, ensuring a neat and tidy workspace.

### Height adjustability

The Gispen TMNL collection has a number of setting and adjustment options for the height of the desktop.

You can opt for fixed height with manual height adjustment or flexible height with a hand crank or electrical adjustment.

- Manual height adjustment from 65 to 90 cm
- Height adjustment with hand crank from 65 to 90 cm
- Electrical height adjustment from 65 to 90 cm

If you wish to switch between sitting and standing throughout the working day, you can opt for manual or electrical 2- or 3-step height adjustment.

- Electrical 2-step height adjustment from 68 to 118 cm (sit/stand)
- Electrical 3-step height adjustment from 65 to 130 cm (sit/stand)
- 3-step height adjustment with hand crank from 65 to 130 cm (sit/stand)

Gispen's standards for the adjustment options go beyond the EN527 and NPR1813 standards.

## MODULARITY ALLOWS FOR UPSIZING

### Highly efficient

Gispen TMNL helps cost-conscious organisations to keep evolving in a responsible way. The product is highly efficient, versatile and sustainable. The components are easily combined and are even interchangeable, if a cost-saving solution is required.

If you opt for a basic setup at first, you can upgrade your desk by adding accessories and cabling at a later point in time. All add-ons are easily and quickly integrated.

### Front workstation

It is possible to place an additional workstation at the front end of a dual workstation. The added workstation is a full-sized adjustable desk of 170 by 80 cm. These dimensions match perfectly with the width of the dual setup. An ideal solution for an agile workstation, or for a three-person team. Individual dividing screens and cable ducts are possible.

ALTERNATING POSITIONS IS **HEALTHY** AND  
WILL **PREVENT** HEALTH ISSUES FROM ARISING

### Alternating positions is healthy

Sitting for prolonged periods is bad for your health. At the same time we are tied to our workstations because we need computers in order to carry out our jobs. The only solution is then to be able to alternate between sitting and standing, which is one of the guiding principles of the TMNL desk. The adjustable tabletop is quickly set to the desired height. Go from 65 to 130 cm or from 68 to 118 cm for a standing position in 16 seconds, or back to a seated position again.

### Standing aid

Meeting the EN527 and NPR1813 standards is all well and good, but what is most important is that users can easily and quickly find the right work posture and alternate between positions. The standing aid supports working in a standing position. Moreover, the optional Gispén GRIP solo or duo monitor arm makes it possible to adjust your computer monitor into any position.

### Working comfortably

Whether employees want to focus on their task, hold a standing meeting or sit down and work together or check their email; it is all possible with TMNL. The activity and time of day determine how TMNL is used. Every user sets their desk to their own preferred height and setting. Changing positions is a quick and easy process due to the electric height adjustment system.

### Dynamic teamwork

The Gispen TMNL collection now also offers a series of sit-stand tables in addition to its desk programme. This new product line has been specially designed for agile working methods.

The TMNL Agile programme is designed to support multiple activities, while stimulating users to keep moving and alternating postures during desk work. Did you know that stand-up brainstorming sessions promote creativity and effectiveness? The power adjustment system allows you to change the desk from a seated to a standing height (or vice versa) in no time at all.

The TMNL Agile programme features tabletops of different shapes: round, rectangular, square and triangular. These options will make it easier to give your interior a look that suits your organisation. A round table creates a more friendly ambience and establishes mutual equality between conversation partners, while offering a flexible number of seating or standing places.

PROMOTE **CREATIVITY** WITH  
**STAND-UP** BRAINSTORMING SESSIONS

### Optimal support

A proper brainstorming table offers all the attributes that are needed for agile working.

Handy accessories to support brainstorming activities

Easily adjust the desk height and encourage movement while working

Power outlets integrated into the tabletop for laptops, tablets, phones and other devices

A monitor for presentations and digital meetings

Being able to change activities easily and benefit from multifunctionality with mobile furniture

### Change your entire setup in the blink of an eye

The ideal agile room is just as flexible as the working method itself and contains multifunctional and dynamic furniture. This allows users to change the layout or setup to suit their activity.

The entire TMNL Agile collection is mobile; countless setups are possible which - in turn - ensure optimum support for your various agile activities. In addition to the tables with fixed tops, the TMNL Agile collection also has a sit-stand folding table!

The TMNL Agile folding table can be used in the following ways:

1. With a horizontal top, as you would expect from a standard sit-stand table.
2. With the tabletop in a 'drawing board position' (at a 20-30 degree angle), making it easier for you to draw or write comfortably.
3. With a vertical top, allowing you to use the table as a presentation board. This also makes for easy stowage.

The mobile folding table can be adjusted from a seated to a standing height (or vice versa) in no time at all. It is due to the integrated battery pack that this can be done without a power cord, making flexible teamwork truly efficient!

**KEEP IN MOTION** WHILE WORKING,  
**TMNL AGILE** WILL MOVE ALONG WITH YOU

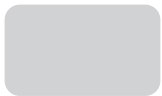

## ENDLESS POSSIBILITIES WITH A SINGLE, UNIVERSAL FRAME

You can attach accessories to both sides of the universal bracket. These include various storage trays, a monitor and a power strip.

Do you require extra privacy? Then opt for the screen made of PET felt. The easy attachment system allows you to change your configuration with a single click, making the accessories fully flexible in use!

### TABLETOP SHAPES AND DIMENSIONS - AGILE TABLES

160x80\* / 180x90 / 200x100\* / 240x120 / 240x100\* / 320x160 cm

Rectangular top with rounded edges

Barrel-shaped top  
240x150 cm

Square top  
160x160 cm

Round top  
160 or 200 cm

Triangle top  
160 cm

\*Also available as a table on castors

### TABLETOP SHAPES AND DIMENSIONS - AGILE FOLDING TABLES

180x100 and 240x100 cm

Rectangular top with rounded edges

### CHOOSING THE RIGHT HEIGHT ADJUSTMENT SYSTEM

Your most ideal height adjustment system depends on your preferences for flexibility, comfort and support. You can choose between the following options:

**Power adjustable:** high level of comfort due to easy operation, adjusts from 65 to 130 cm. Power cord required.

**Power adjustable with battery pack:** Complete freedom of movement due to a battery that powers the height adjustment system. No cords needed!

### Workstation or conference table

Why choose? The TMNL sit-stand table can be used as either a workstation or conference table. This allows you to use conference rooms or boardrooms in a multi-functional way. It is also a space-saving solution: you only need a single, multi-functional unit instead of a desk as well as a conference table. Colleagues and clients can simply pull up a chair and join the meeting. An added benefit is that people can also alternate between sitting and standing during meetings.

Royal Gazelle, Dieren

### Work pleasantly in a homely atmosphere

The atmosphere and comfort of home. More and more employees would like to see this reflected in their workplace. With TMNL Round you meet that need. The tabletops with organic shapes and rounded corners in combination with the round legs give TMNL Round a warm, homely appearance.

From concentrated work to collaboration, with TMNL Round you can go in all directions. The collection consists of solo, duo and trio desks and (meeting) tables for office and home work environments. There are doc desks especially for the healthcare environment.

Combine the timeless components to create countless setups. You can easily adjust the setup if the needs in your organisation change. You can easily convert duo desks into solo desks, and vice versa.

The standard integrated electric 3-step height adjustment, adjustable from 65 to 130 cm (sit-stand), supports healthy, creative and productive working.

CREATE A **HOMELY ATMOSPHERE**  
WITH ORGANIC SHAPES

### Personalised setup

With TMNL Round you can choose from desks in different versions: solo, duo, trio and doc. You can link or combine them as desired. Complete your setup with dividing screens and accessories. There is also a wide choice of (meeting) tables that support activity-based working.

### SOLO

- Individual workplace
- Flexible in use
- With removable leg toe that can be rotated at an angle of 15, 30 or 45 degrees and emphasises the organic shape of the tabletop

### DUO

- Combines two tabletops on one base
- Individually adjustable tabletops
- Removable crossbar for easy conversion to solo setup and vice versa

#### TRIO

- Combines three tabletops on one base
- Individually adjustable tabletops
- The alternative to a duo desk with front desk

#### CONFERENCE TABLE

- Barrel-shaped, rectangular, square or round
- A suitable model for every room and activity

#### Intelligent System Protection

Intelligent System Protection (ISP) is integrated into the control box. The sensor registers pressure changes in the tabletop during upward and downward adjustment of the table. And ensures that when pressure changes, the table immediately stops and moves about 10 mm in the opposite direction. This prevents any damage during adjustment.

#### DOC

- A triangular tabletop on three legs
- The front side offers space for a monitor
- Ideal for consultation rooms and other workspaces in the healthcare environment

Preparing for reuse

Gispen has opted for innovative design, sustainable manufacturing and circular use of furniture. The benefits of circular furniture:

#### FOR YOUR COMPANY

- Value retaining furniture
- Can be adapted (on site) to meet changing needs
- The option to pay per use
- Experience that 'new' feel, even when it concerns refurbished items
- Contribute to the reduction of eco-tax

#### FOR YOUR SURROUNDINGS

- Eliminate raw material wastage
- Less eco-tax
- An increase of local employment opportunities

### Returns and reuse

When TMNL was being designed, we already took account of future returns and reuse of components and materials. Gispen stands for high-quality products and we remain responsible for these products throughout their lifecycles, while reducing waste production where possible. Therefore, we will take back your TMNL product when it has reached the end of its lifespan after which we will repurpose it or refurbish it to brand-new quality.

### Ambition

Gispen aims to produce 100% circular products. This ambition, however, requires the realization of a very complex process which is influenced by many variables. And we are well aware that we are not quite there yet.

### Circular services

Gispen offers the following additional services in order for you to make optimal use of your TMNL unit:

- TMNL is installed by skilled Gispen fitters, allowing you to get to work right away.
- Preventive maintenance we ensure that your workspace is always at its highest utility.
- Would you like to change the function, colour or material of your TMNL unit? Gispen will realise the upgrade for you, right on location.
- Has your workstation become redundant? You can return it and we will give it a new lease of life through our Circular Hub.

GISPEN GUARANTEES THAT ITS **PRODUCTS AND MATERIALS RETAIN THEIR VALUE**. WE **PREVENT WASTE PRODUCTION** AND YOU **REDUCE COSTS**

### REVIVED tabletop

A REVIVED tabletop is an innovative, circular choice for an Gispen TMNL table or desk. It reduces the environmental impact whilst choosing a robust material with a long life-span.

Compact material has been widely used for tabletops in the past. Tabletops made of this material can last up to 30 years. In practice, they are replaced after 10 years on average and the material is lost.

Our Circular Hub takes in around 5,000 used Compact tabletops every year. These can be provided with a new top layer. These REVIVED tabletops are ready for their next life cycle. This process leads to a carbon footprint reduction of about 95%. By repeating it, we retain the value over multiple life cycles.

\*with dimensions 160 x 80 x 24 cm

### Lightweight tabletop

Do you want to further reduce your carbon footprint? Then choose a circular tabletop from Greengridz®. This strong, lightweight tabletop is perfect for the desks and (conference) tables from the TMNL collection. Due to its light weight, the top is also easy to install.

The tabletop consists of a grid of HDF panels made of sustainable, certified wood. The panels are CARB2 certified, free of formaldehyde and glued with environmentally friendly PVAc D3 adhesive.

The tabletop weighs on average up to 60% less than an MFC tabletop.\* This makes transport less harmful to the environment. This results in a CO<sub>2</sub> reduction, both during the production process and after the end of its lifespan.

More plus points:

- suitable for BREEAM, WELL and LEED certification
- designed for recycling systems
- certified according to Nordic Swan Ecolabel
- meets the same flexural strength requirements as solid tabletops

The tabletop is available in the following sizes:

- 120/140/160/180 x 80 cm (with straight or rounded corners with a radius of 50 mm)
- 240 x 150 cm (barrel-shaped, for conference table)
- 320 x 160 cm (rectangular with rounded corners, for conference table)
- The thickness is 24 mm

\*with dimensions 160 x 80 x 24 cm

WELL-SORTED **CABLE**  
**MANAGEMENT** MAKES FOR  
A **SAFE** AND **TIDY** WORKSPACE

Croonwolder&dros, Rotterdam

### Cable management

Well-sorted cable management guarantees a safe and tidy workspace.

This is why TMNL offers a wide range of cable routing options. If there is need for a higher capacity, TMNL will adapt and facilitate that change. TMNL can be adapted to fulfil any requirement in a few simple steps:

1. The power supply differs per organisation. TMNL offers a suitable solution for any type of power supply.

2. Power is provided by a single cord which is routed through a special flexible cable tubing. Straightforward and efficient, due to cleverly placed openings for access.

3. The flexible cable tubing ensures that cords and cables stay neatly tucked away. When you set your workstation to a different height/position, the cable tubing will simply move along with it.

4. The cleverly designed magnetic cable holder allows you to install the flexible cable tube anywhere onto the frame.

5. We offer cable ducts in different sizes to accommodate different quantities of cables and power sockets.

6. There are different options for how you wish to have the power and data supply arranged on the tabletop.

7. Monitors can be fitted to the tabletop via a Gispen GRIP solo or duo monitor arm. The clever design ensures that the tabletop keeps its extendable function for easy access to the cable duct.

8. It is always possible to make any subsequent changes to the cabling after the installation. The optional sliding top will allow you to access all the cabling in a single action. Plug & play for both the user and the IT specialist.

## CLEVER DESIGN

The table legs of a four-pack TMNL setup can be placed so tightly next to one another that you can hardly fit a pin in between the two.

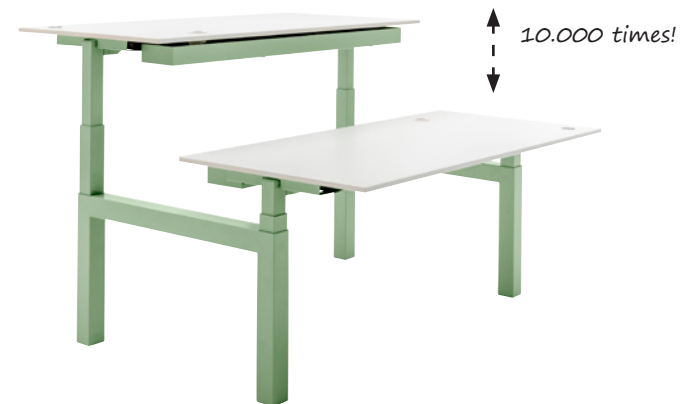

## YEARS OF EXPERIENCE

Functional and straightforward were starting points for the design. It is the driving force behind TMNL. We kept improving the height adjustment technology, keeping up with new requirements. Functional and straightforward, a winning concept!

## OFFICE TRENDS

Most organisations change their interior every eight years or so. After all, colours and designs are sensitive to trends. Does this sound familiar to you? In that case it will be good to know that with TMNL – and all its variations, applications and accessories – you are set for the foreseeable future.

## ENDURANCE TEST

We moved TMNL up and down over 10,000 times in the endurance test (from sitting to standing and back), without having to carry out any maintenance. In reality, this means that you can use your workstation in a maintenance-free way for more than 20 years on average!

# MARCK HAANS

Marck Haans (1962) studied at the Royal Academy of Art and Design in Den Bosch from 1982 to 1988, after which he immediately started at the Design Academy in Eindhoven.

Building on what Peter de Boer and Marck had realised in their previous collaboration, the driving force behind TM's initial 2003 design could now be further developed in terms of function. Fifteen years later, thanks to Marck, TMNL could last another decade or two. Especially noteworthy is how the sit-stand adjustment has been integrated into the design.
