

CIMO
CLEVER, CIRCULAR DESK COLLECTION

What is it that makes CIMO so different from other workstations?

CIMO derives its name from the innovative combination of its 'circular' and 'modular' characteristics. The CIMO desk collection combines peerless sustainability with clever design. Not to mention its smart adjustment mechanism, as well as a unique design that supports a healthy way of working. Flexible, quick and simple to operate, CIMO allows you to freely alternate between sitting and standing at your desk.

INTRODUCTION

Change is the one constant factor for many organisations. All kinds of changes can affect your office and work environment, directly impacting your business. There is a growing focus on health, well-being and performance.

In addition, globalisation and the Internet of Things have changed the way we do business. Resources are becoming scarce and as a result, companies are working towards sustainable entrepreneurship.

Keeping up with these trends calls for a certain dynamism within your work environment. The number of employees may vary, and how they interact can differ too.

Are you looking for maximum flexibility in the workplace?

If the answer is yes, then CIMO offers the perfect solution for you. This unique desk collection has been specially designed to withstand the test of time.

HOW YOU CAN BENEFIT FROM CIMO

- **Design your own:** a wide range of options to give your interior an individual look that suits your organisation.
- **Future proof:** CIMO is easy to adapt to your future needs, while being environmentally friendly. The frame, for example, is fully recyclable. Redundant components can be easily returned to Gispen; this is how we work towards a circular economy together.
- **Optimal use:** the integrated innovative technology has made it possible to create a unique and sleek design, but also ensures that CIMO uses no energy at all.
- **Ergonomics:** varying postures while working improves the well-being of your employees.
- **Circular entrepreneurship:** designed to guarantee future returns and reuses, with CIMO you will join Gispen in contributing to the circular economy.
- **Clever workstation:** well-organised cable management ensures a safe and tidy place of work.
- **Adaptable on site:** workstations which can easily be adapted on site at any time, will save you transportation costs and will result in fewer workplace disruptions.

CLEVER. SUSTAINABLE.
MODULAR.
FUTURE PROOF

DESIGN YOUR OWN

Fontys university

A personal touch

The CIMO workstation comes in many forms. Its basic design is sleek and modern; you can combine endlessly from an extensive assortment of components to give each desk a personal touch. Choose from a wide range of colours and tabletop finishes; modules and accessories can be added or left out. Add some warmth to a workstation by adding a fabric dividing screen. Are you looking for a more natural look? Why not opt for the multiplex top?

This way you can give CIMO your own distinctive look. The optional modules have been designed in such a way that you can create a personalised CIMO workstation time after time. Great attention to detail has gone into the CIMO furniture collection. The distinctive design of the exposed connector is an example of how proud we are of its modular abilities. While the unique frame of only four centimetres thick is the perfect example of slenderness and innovation.

Future proof

In the ever changing business environment, this versatile and modular system ensures that CIMO meets all the workplace requirements of today, as well as those of tomorrow. The basic structure of CIMO stands, but its function and appearance can be easily changed to suit new requirements, even after several years of use. This is made possible due to its modular connections; everything is put together via screw-, magnet- and snap-on connections. No special tools are required for (dis)assembly.

One of many options available is to upgrade a single workstation to a workstation for-two, or the other way around. Convert an open working area into a private working area by adding dividing screens, or simply change the colour scheme.

With just a few connection points, changing the setup of the workstation from sit-sit to sit-stand (or the other way around) couldn't be simpler. This enables your employees to change postures regularly, preventing possible health issues.

Moreover, CIMO adapts easily to different working methods. From working individually to working together and from focusing to consulting. CIMO offers the perfect solution for "agile" working, such as Scrum.

UNIVERSAL FRAME PROVIDES ENDLESS POSSIBILITIES

*The frame has a
profile of only four
centimetres!*

*A workstation for two
to accommodate different
needs? Why not install
sit-stand on one side and
sit-sit on the other?*

What is your favourite way of working?

We spend many hours a day at our desks, so a pleasant environment is vital to our well-being and happiness. A comfortable work posture, good acoustics, the right lighting, user friendliness and materials and colours that contribute to a pleasant atmosphere – they are all equally as important. Design your perfect workstation with CIMO.

Have everything within arm's reach

Nothing is as frustrating as having to crawl under a desk to find a power socket or USB port. CIMO makes working in the digital era simple; it offers a practical solution by offering power and data from the tabletop.

Concentrating and working together

Having the right balance between being able to concentrate and communicate with colleagues is crucial. CIMO will help you find the perfect balance. You can choose between dividing screens of different heights, which have the added benefit of improving the acoustics of the room. You can also choose between an open or closed structure.

There's no accounting for taste

We all have different ideas about what is comfortable or aesthetically pleasing. We understand that there is no accounting for taste. Because of this, we offer a wide range of shapes, colours and materials for the CIMO furniture collection. Mix and match to form your ideal workstation and optimal setup.

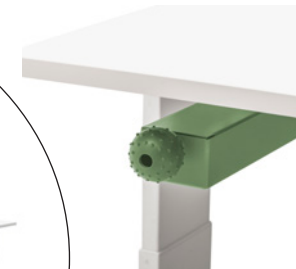

UNIQUE QUICK-ADJUST SYSTEM
WITH **CRANK HANDLE**

Varying postures is healthy

Sitting at a desk for long periods of time is unhealthy. But our necessity to working with computers means that we are basically stuck to our desks. Being able to vary between a seated and standing position is essential for our well-being, and this is exactly what CIMO does best - quickly, easily and cost effectively.

Gispen breaks new ground with CIMO. We have developed a revolutionary

manual quick-adjust system that is integrated into the frame. The crank handle adjusts the desk by no less than 3 cm with each rotation, a massive improvement compared to systems that have been available up until now, which only adjust by 3 mm per rotation. Operating the crank handle and varying work postures will allow you to stay in motion behind your desk. Add the Gispen Sportable, and you are guaranteed better health at the office.

**Tip of the day**

Vary between a seated and a standing position on a regular basis. Take regular breaks and try to get some exercise by using the Gispen Sportable.

sit-sit
(65-90 cm height adjustable)

CIMO CABINET

CIMO Cabinet is a stylish and practical addition to the CIMO family. It is due to its stable and sturdy structure that this shelving unit can be placed separately in a room without having to fasten it to anything. Create your own look with shelves and planters.

You can choose between steel or poplar plywood shelves, which come in the familiar colours of the CIMO collection. Add some planters for an attractive and healthy office environment.

Attention to detail

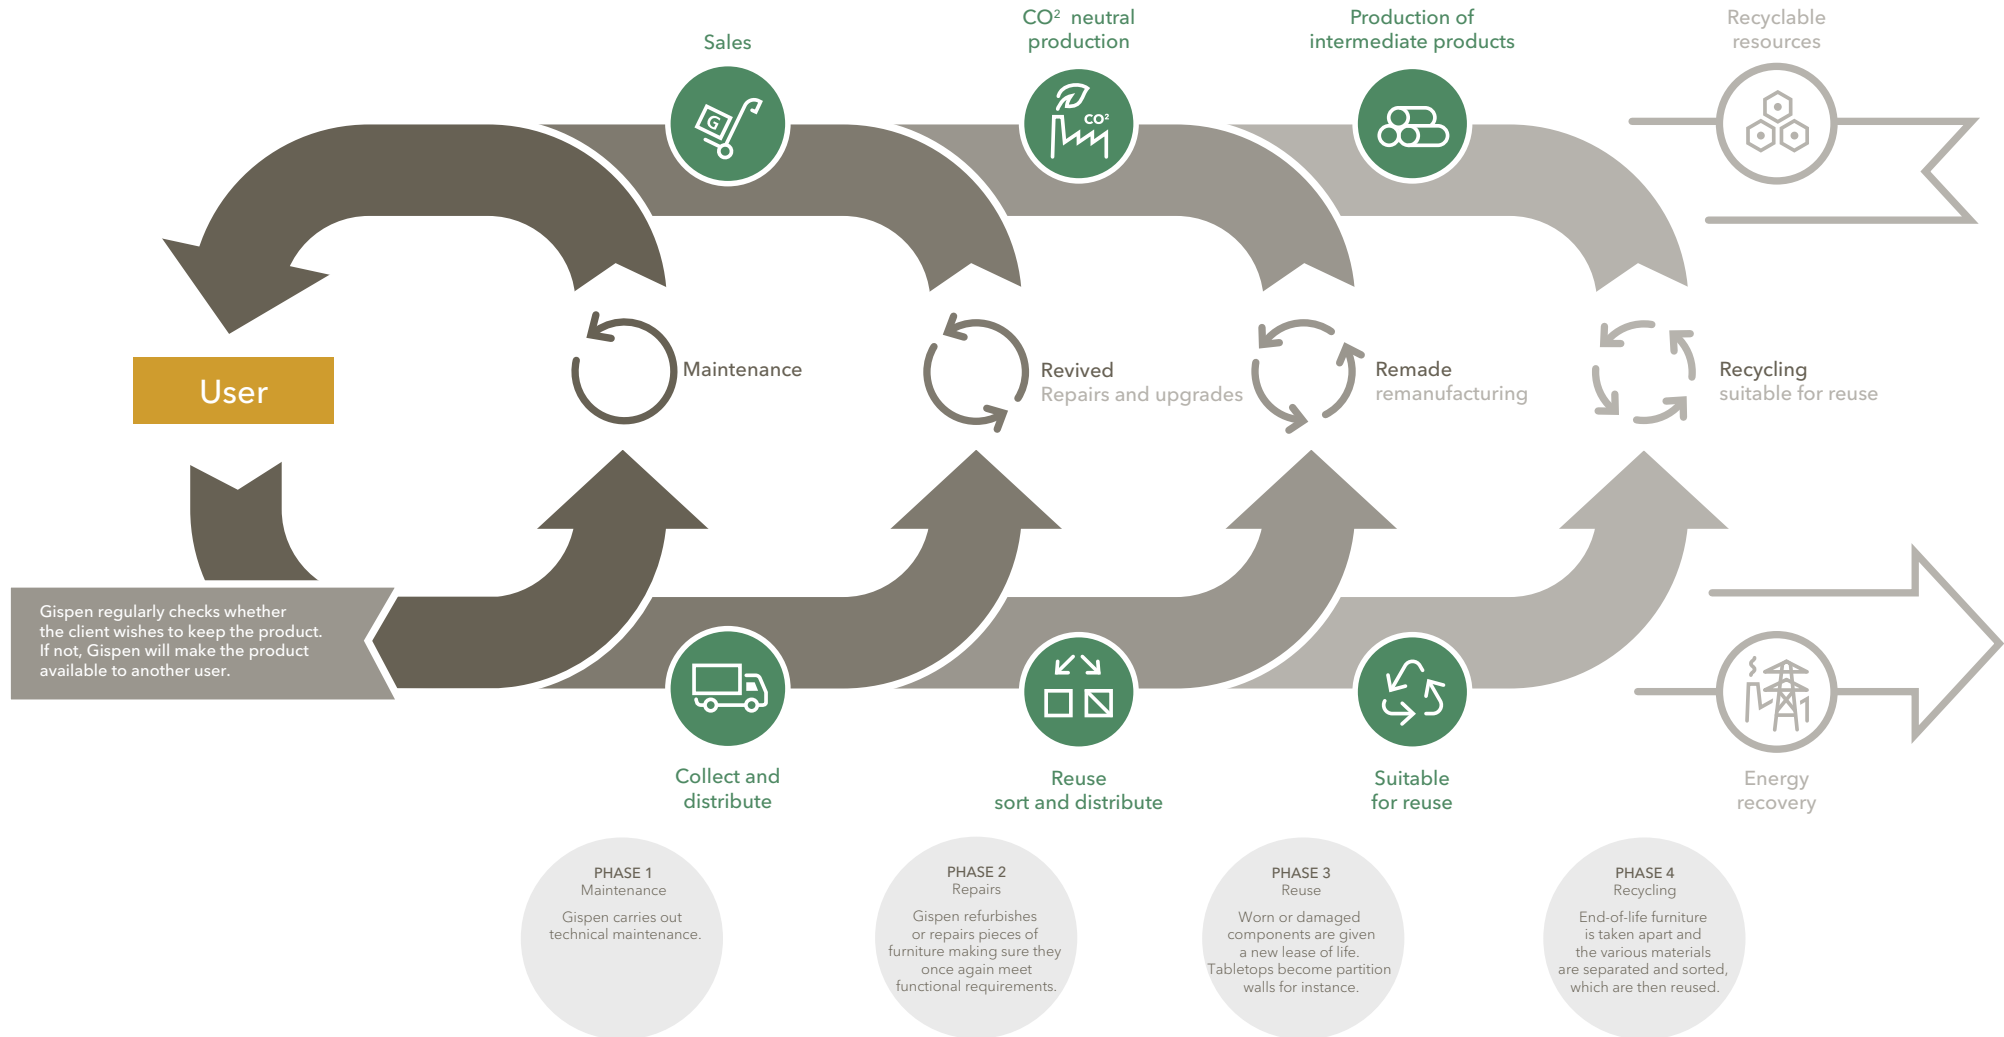

The connection points of the shelving unit are identical to those of the CIMO

workstations. These essential components are characterised by their high-quality finishing; besides being functional, they also present a striking design element.

Mix and match with CIMO workstations

There is also the option of connecting a CIMO shelving unit to a CIMO workstation. The possibilities are endless; the connection points have been designed in such a way that you can either extend your setup longitudinally or at a 90 degree angle. The width is 74 cm, depth: 40 cm and there are three different heights to choose from: 110, 165 and 220 cm.

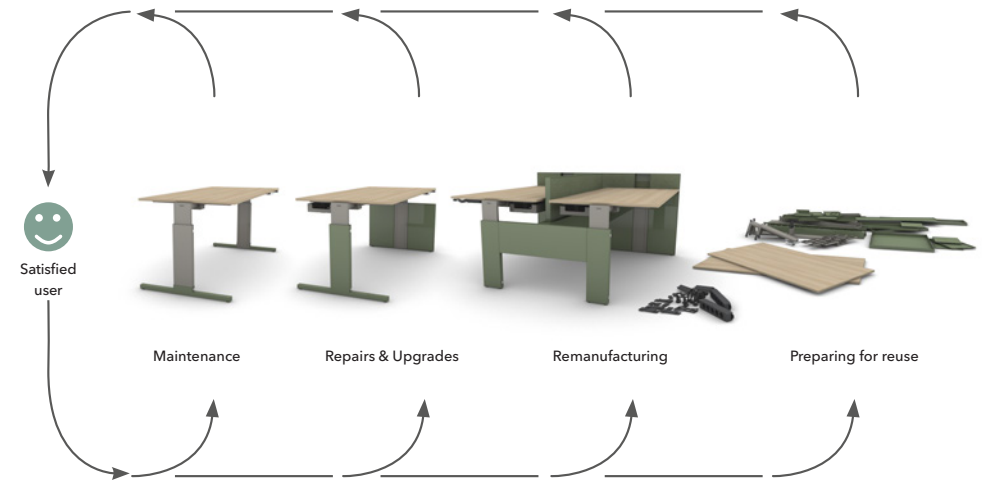

Returns & reuse

Gispen fully embraces the circular economy and it is because of this philosophy that we take account of future returns and reuse possibilities in the initial stages of the design. Gispen stands for high-quality products and we remain responsible for those products throughout their lifecycles, while reducing waste production where possible. We will take back your CIMO furniture when it has reached the end of its lifecycle, after which we will repurpose it or refurbish it to brand-new.

Circular services

Gispen offers the following services in order for you to make optimal use of your CIMO workstation.

- CIMO is installed by skilled Gispen fitters, allowing you to get to work right away.
- Preventive maintenance will ensure that your workstation is always at its highest utility.
- Would you like to change the function, colour or material of your CIMO setup? Gispen will take care of this upgrade for you.
- Has your workstation become redundant? You can return it and we will give it a new lease of life via our REVIVED by Gispen concept.

Gispen has opted for innovative design and manufacturing and efficient use of furniture.

You will gain the following if you join us in our endeavour:

FOR YOUR COMPANY

- Value retaining furniture
- Furniture that can be adapted (on site) to meet new requirements
- The option to pay-per-use
- Experience that 'new' feel, even when it involves refurbished items
- Contribute to the reduction of eco-tax

FOR YOUR SURROUNDINGS

- Eliminate raw material wastage
- Less eco-tax
- An increase of local employment opportunities

WE MAKE SURE THAT OUR **PRODUCTS AND MATERIALS RETAIN MAXIMUM VALUE.**

WE **PREVENT WASTE** PRODUCTION AND YOU **SAVE ON OFFICE EXPENSES**

PROPER CABLE MANAGEMENT
PROVIDES A SAFE AND TIDY
PLACE OF WORK

Cable management

A workstation without a PC or laptop is unthinkable in today's office environment. Proper cable management provides a safe and tidy place of work. The CIMO range offers a wide variety of cabling options. If there is need for a higher capacity, CIMO will adapt and facilitate that change. By following a few simple steps, we can make CIMO meet every requirement you may have:

1. The way power is supplied differs per organisation. CIMO offers a solution for every method of power supply.
2. Power supply is provided by a single cord which is routed through a spacious cable duct. Straightforward and efficient, due to cleverly placed openings for access.
3. The flexible cable tubing ensures that cords and cables stay neatly tucked away. If you adjust the position of the workstation, the flexible tubing will move with it. You can position the flexible tube wherever you want due to the cleverly designed magnetic cable holder.
4. We offer different sized cable ducts to provide a solution for every organisation.
5. There are different options for how you wish to have the power and data supply arranged from the tabletop.
6. Monitors can be fitted to the tabletop via a monitor arm. The clever design ensures that the tabletop keeps its extendable function for easy access to the cable duct.
7. Would you like to change your arrangement of cords and cables at a later point in time? You can! CIMO's slidable top allows you to access all your cords and cables with a single push of a button. A plug-and-play system for the user and the ICT expert.

1. tailored cable management

2. cable box

3. flexible cable tubing

4. magnetic cable holder

5. large & medium cable tray

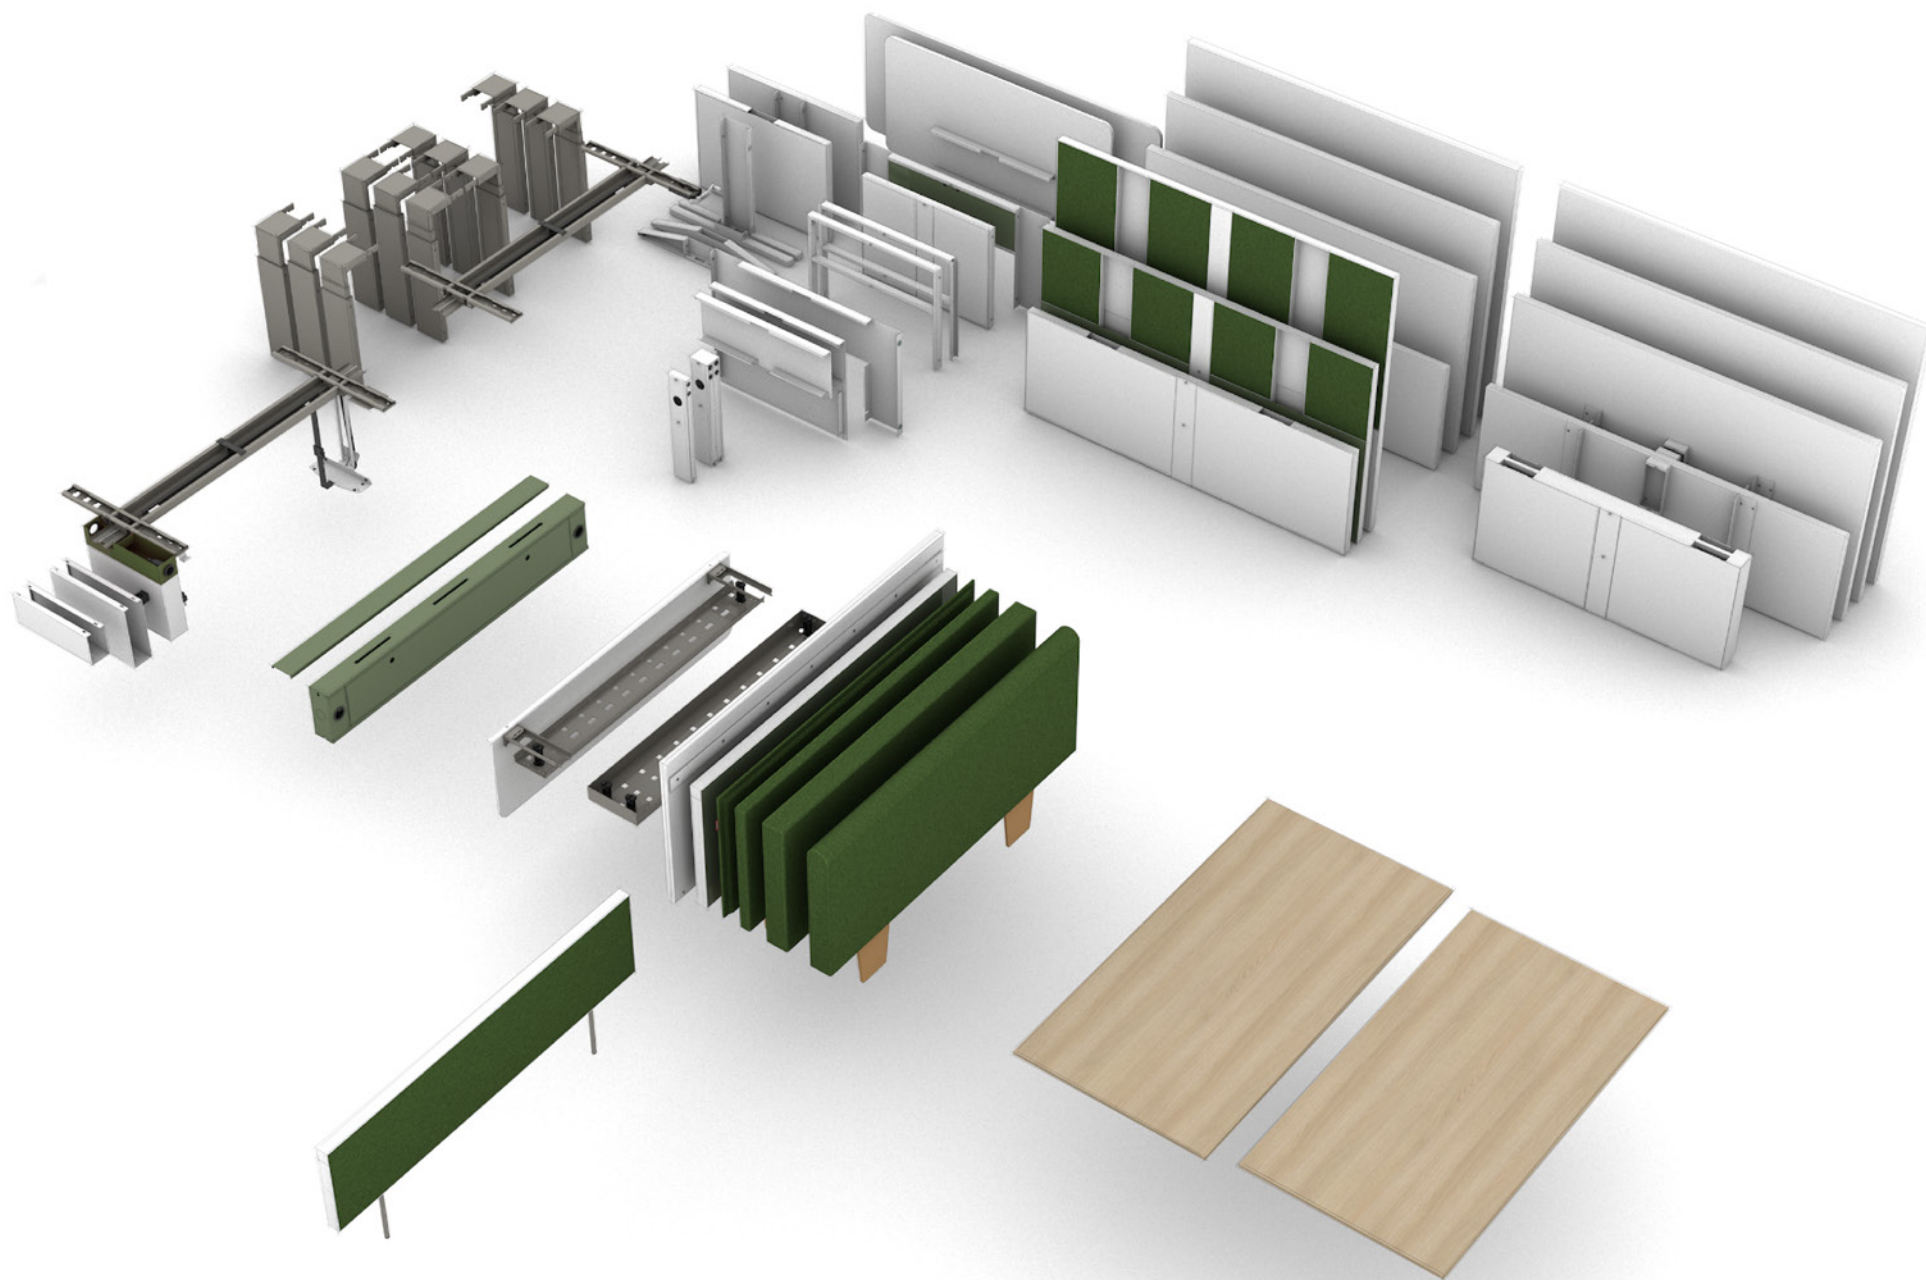

6. adjustable power supply dock

7. monitor arm with docking station

8. slidable tabletop

Smart investment

CIMO's clever construction offers many advantages. One of which is the quick and easy installation of the workstations, assuring a swift delivery or exchange procedure. Adapting your workstations is also an easy process, which can be done on site.

The CIMO range consists of a number of fixed modules, allowing you to change the appearance or function of a workstation at any given time, without having to acquire new office furniture. This will guarantee a good return on your investment.

Pay-Per-Use

Keeping in mind the long lifespan and easy upgrade options, you may want

to consider a pay-per-use construction instead of acquiring CIMO. You will then pay a fixed monthly instalment and we will provide you with an optimal workstation, whenever, wherever.

Benefits

- A subscription for the use of furniture
- Keep track of your expenses with a fixed monthly instalment
- An affordable alternative to procurement or lease without any high investments in advance
- Your workstation(s) always adapted to your current situation and needs.

Would you like to know more about Pay-Per-Use? Please do not hesitate to contact us, we will be happy to provide assistance.

PRIVACY AT THE OFFICE

Do you want to be able to stay focused while working? A workstation that offers privacy is just what you need.

By adding a dividing screen or privacy screen to your CIMO workstation, you can create a visual partition from the rest of the office while improving the acoustics at the same time. The acoustic value differs from screen to screen, all variants have been put through a Peutz test. We would be glad to offer you our assistance in getting the very best acoustic result for your office.

All dividing screens are available in 95, 115 or 135 cm high.

OFFICE TRENDS

Most organisations change their interior every eight years or so. After all, colours and designs are sensitive to trends.

Does this sound familiar to you? In which case, it is good to know that with CIMO – and all its variations – you are set for the foreseeable future.

PUT IT DOWN TO EXPERIENCE

Gispen has been actively involved in the field of sustainability for many years. In 1977, Gispen designed the ST furniture line, or 'SchakelTafel' (link table). Removable table legs and tops offered unlimited configurations. A kind of Lego for facility managers.

EASY ADJUSTMENT

Via CIMO's crank handle you can adjust your desk height by no less than 3 cm in just one rotation, setting the new benchmark for speed and ease of use as well as making electronically powered adjustment redundant. Not only is our adjustment system user-friendly, it is also sustainable and cost-effective.

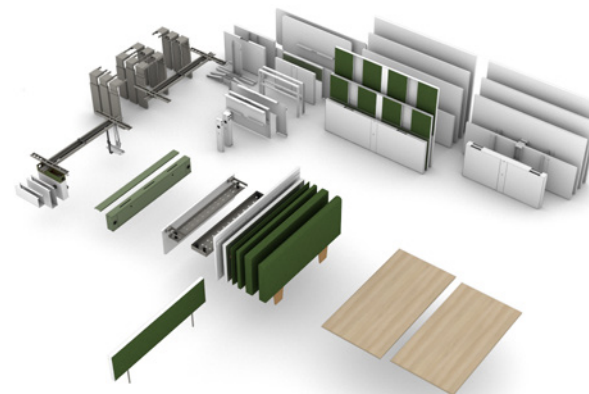

ENDURANCE TEST

We have put CIMO through an endurance test in which we moved the desk up and down 10,000 times (from sitting to standing and back), with no maintenance required. This means that you can use your CIMO desk for 20 years without having to worry about a thing!

YOU HAVE A DELIVERY!

The modular system makes it possible to transport CIMO in a flat position (flatly-packed), which not only saves costs but also reduces CO² emissions due to efficient transport.

PETER DE BOER

Peter de Boer (1952) studied Mechanical Engineering and Industrial Design at the Rietveld Academy. He worked as a freelance designer for a short while before he became affiliated with Gispen, where he has been working as a product designer since the 1980s.

CLEVER FURNITURE CONCEPTS
ARE DEVELOPED **FOR THE OFFICE OF
TODAY AND THAT OF THE FUTURE.**
THIS ALSO HOLDS TRUE FOR CIMO.

What do you stand for as a designer?

I consider quality and sustainability to be of vital importance. My philosophy is not about tempting clients with a continuous stream of new products. I believe that clients will continue to come back when your products have proven to withstand the test of time, retaining their quality and value. Gispen celebrates its 100th anniversary this year. This incredible accomplishment was achieved because we offer lasting quality, which I am proud to be a part of as a designer.

What does the Gispen brand mean to you?

When I think of the Gispen brand, I think of continuity, quality and sustainability.

What is the idea behind CIMO?

Clever furniture concepts are developed for the office of today and the future. This also holds true for the frame of the CIMO desk. You can expand or change

this universal, maintenance-free frame whenever you desire.

What does your typical day look like?

As a designer, you spend a lot of time thinking about your next design. In fact, a lot of the thinking has already been done before anything gets drafted.

In Culemborg, one of my daily routines is to assist the factory workers in manufacturing my designs. I will also have one or two meetings with colleagues from, for instance, the sales department and I am on the road quite a lot. I'm practically the company's historian because of my long service record here.

I know all about the products we have created in the past, the materials we use today and the various options we have on offer. I can therefore get involved in business meetings with (potential) clients, which I really enjoy taking part in.

A WORD OF ADVICE FROM THE DESIGNER

Listen to the people around you but follow your own path.
